VICO 2162 Individual Website Proposal

For my individual website, I am going to do a portfolio site. This will be really useful to have as a space to show off recent design projects and creative endeavors. Currently, I utilize portfolio websites like Behance, but having a portfolio website that I created *myself* will be a great way to highlight my growing web design skills as well as the creative work featured on the site. My design will be simple and limited to the kind of coding I can do at my level of HTML/CSS understanding. Regarding the design and color choices, I like shades of blue and think they work well in professional settings like a portfolio piece. I don't know the exact fonts yet, but I do know that I want to stick with sans serif fonts.
